

Industrial Communication

Data that moves your industry

Industrial communication at the highest level – with LAPP as a reliable partner

In a networked industry, a reliable communication infrastructure is the backbone of efficient processes. Whether in renewable energy generation, food & beverage processing or automated logistics – wherever machines, systems and controls interact with each other, robust, high-performance and optimally designed components are essential.

However, each industry has its own requirements: UV resistance in solar systems, torsion & temperature resistance in wind turbines, cleaning resistance in the food & beverage industry or permanent bending loads in intralogistics – the products used must be precisely matched to the application.

With LAPP, you choose a partner that takes a comprehensive approach to cabling solutions for industrial communication. Our portfolio offers everything that is necessary for stable communication – from highly flexible data cables and EMC-protected connectors to ready-to-connect solutions that can be supplied worldwide.

Your advantages with LAPP at a glance:

- Over 65 years of experience in industrial connection technology.
- Complete solutions from a single source – from the cable to the assembled system.
- Worldwide availability through a strong sales and logistics network.
- Technical advice – from the project idea to commissioning.
- The highest quality, tested according to international norms and industry standards.

Discover how industrial communication efficiently connects machines and systems.

You can find more information on reliable data transmission in the industry here.

Connections that create the future – reliably networked with LAPP

The digital transformation is fundamentally changing industrial processes. In all sectors, the demands on communication systems are increasing. They must not only be powerful, but also adaptable, durable and future-proof.

With our comprehensive portfolio, we create the technical basis for modern industrial communication – whether in the field, in moving applications or in the control cabinet. LAPP not only supplies data cables, but also complete connection solutions: robust plug-in connectors, ready-to-install system components, active network devices, practical accessories – and the technical advice that turns them into a functioning solution.

LAPP stands for quality, innovation and uncompromising reliability.

Our products are more than just components – they are the basis for efficient, safe and stable processes in your application. Whether you are planning new plants, modernising existing systems or need to react to industry-specific requirements, **we are with you every step of the way. Personally. Competently. Worldwide.**

Discover our product portfolio now.

Customised solutions just one click away - discover our configurators and finders.

Intralogistics

High-performance connection technology for dynamic processes

In intralogistics, speed, flexibility and reliability are essential. Automated conveyor systems, AGV systems, stacker cranes in ASRS – they all depend on stable data communication.

LAPP supplies highly flexible data cables, reliable plug-in connections and ready-to-connect systems that are specially designed for applications involving constant movement with high bending cycles. Even with limited installation space and short cycle times, our products impress **with their durability and precision.**

Whether industrial Ethernet, torsion-resistant data cables, assembled systems or accessories for quick installation – with LAPP you get the optimal connection solution for networked, automated logistics processes.

Typical requirements:

- Continuous movement & flexibility: for cable chains, robots, shuttles.
- EMC protection: interference-free data flow despite the machine environment.
- Compact design and easy assembly: ideal for confined spaces.
- Real-time capability: high data rates, low latencies.

Discover solutions for your intralogistics.

Food and Beverage

Communication under the strictest hygiene conditions

In the food, beverage and packaging industry, efficiency, hygiene and process reliability are crucial. This requires a cabling solution that is chemical-resistant, easy to be cleaned and reliable – consisting of ECOLAB® or FDA-compliant products, matching connectors and hygiene-compatible accessories.

Cleaning processes with aggressive media, high humidity and temperature changes are common. Particularly in food processing areas, all components must meet the requirements for hygienic design.

From chemical-resistant cables and hygienically designed connectors to ready-to-connect system solutions – LAPP offers a comprehensive portfolio for safe industrial communication in food and beverage production.

Typical requirements:

- Cleaning & temperature resistance: ECOLAB® products for frequent cleaning.
- FDA conformity: for food processing areas.
- Protection types and materials: high IP classes, rust-free metal parts.
- Compact, flexible solutions: for confined installation situations

Solutions for the food and beverage industry - discover now.

Solar

Efficient communication for maximum system performance

In large photovoltaic systems, a reliable communication infrastructure is essential to exploit the full potential of solar energy. Components such as PV modules, inverters, controllers and monitoring units must be permanently and securely networked with each other – via robust data cables, reliable connectors and suitable system solutions.

This connection technology is exposed to extreme conditions: UV radiation, temperature fluctuations, dust and mechanical stress – for example when laying cables in rough terrain or directly in the ground. In addition to halogen-free cables, directly installable fibre optic cables, field-assembly connectors and weather-resistant accessories are used here.

LAPP offers a complete connectivity solutions for PV systems – from robust cables and EMC-compliant connectors to ready-to-connect cable systems. For long-lasting performance, safe installation and maximum energy efficiency.

Typical requirements:

- Long distances: Fibre optic solutions with high bandwidth.
- Weather resistance: Protection from sun, rain, dust, temperature.
- Mechanical resilience: Direct burial, abrasion and rodent protection.
- Safety standards: CPR certification, halogen-free, flame retardant.

Find out more about solutions for the solar industry.

Wind

Reliable connection – in wind and weather

Wind turbines require highly durable connection solutions that function permanently even under extreme conditions – in the nacelle, in the tower, at the transfer point. LAPP supplies a comprehensive portfolio of torsion-resistant cables, vibration-proof connectors and ready-to-install system solutions for this purpose.

Rotary motion, vibrations, temperature changes, humidity and electromagnetic fields place the highest demands on the components used. Fibre-optic-based solutions are an ideal addition for long distances between turbines or to the control room.

LAPP understands the requirements of the wind industry and supplies systems that are robust, efficient and available worldwide.

Typical requirements:

- Torsion and bending strength: for moving applications in the nacelle.
- Environmental resistance: temperature, UV, humidity, salt spray.
- EMC protection: secure transmission despite generators and converters.
- Long-distance communication: fibre optic cables for low-loss connections.

Find out more about products and services for wind energy now.
