

LAPP eKanban

The digital solution for cable inventory management

Say goodbye to manual inventory monitoring.

Efficient inventory management is essential for modern production – and central to your company's success. With LAPP eKanban, you benefit from intelligent, data-driven stock monitoring for cable drums in your warehouse. This smart solution helps you prevent production bottlenecks and cut your process costs.

What is behind LAPP eKanban?

LAPP eKanban is an innovative IIoT (Industrial Internet of Things) solution for real-time cable consumption monitoring.

The **LAPP eKanban sensor** tracks cable drum rotation and speed, wirelessly transmitting data to the cloud via an IIoT gateway. Activation is simple: just attach the sensor to the supplied RFID label and press a button to connect it to the system.

The user-friendly **LAPP eKanban interface** calculates and clearly displays the remaining cable quantity on each drum, using multiple intelligent parameters. Access is possible from any standard browser, giving you full transparency over stock levels – anytime, anywhere. Regular manual inventory checks and time-intensive stocktaking are now a thing of the past.

LAPP eKanban control center for inventory tracking.

Your benefits at a glance

- **Lean warehouse management** - Real-time inventory tracking reduces capital tied up and optimises the floor space utilisation.
- **Higher productivity and improved planning** - Unexpected bottlenecks and associated production stoppages can be largely avoided with digital cable inventory management.
- **Smart automatic reordering** - Benefit from timely reorder notifications that ensure maximum supply security.
- **Increased efficiency in purchasing and warehouse management** - Complete routine tasks such as annual cable inventory or stock checks digitally at the push of a button.

Why LAPP eKanban?

For decades, LAPP has stood for high-quality products and connection solutions. Developing innovations means understanding customers and putting them at the center of our service offering.

With LAPP eKanban, you always have a reliable overview of your cable inventory, allowing you to avoid production downtime. Benefit from seamless traceability of your cable stocks and maximum process reliability.
